The network visualization displays a large number of nodes and edges, representing the relationships between various research topics. The central node is 'vosviewer', which is connected to numerous other nodes. The nodes are color-coded and sized, representing different clusters and their relative importance. The network is dense, with many overlapping connections. The nodes are arranged in a circular pattern around the center, with some nodes being more prominent than others. The overall structure suggests a highly interconnected research landscape.

VOSviewer

Software gratuito para construir e visualizar redes bibliométricas que foi desenvolvido pelos pesquisadores Nees Jan van Eck e Ludo Waltman do Centre for Science and Technology Studies (CWTS) da Leiden University, na Holanda.
